

Portable Baseball ScoreBook

Our newest product, **Portable Baseball ScoreBook**, runs completely from our USB flash drive. With our USB flash drive, you do not have to install any software to start scoring games on any Windows computer! Just plug-in the flash drive to any available USB port and start scoring your games.

Key highlights :

- No need to purchase multiple licenses for multiple computers -- the USB flash drive is your license to use on any computer. Whether at work, home, or the field, simply plug in your drive and have access to Baseball ScoreBook and all of your teams and games.
- Our USB flash drives are made specifically for running software so they provide better performance than typical off-the-shelf drives. With auto-save enabled and live game uploads the drive works seamlessly.
- Games and teams are default saved to the portable drive in the 'My Fixed It! Files' folder so they aren't left behind on a host computer or otherwise lost. The large 1, 2, and 4GB drives have plenty of room to store multiple seasons of games and rosters for your entire league.
- User-friendly start menu program lets the user simply drag-and-drop games, and teams to start scoring. Graphic meter indicates the current available space on your drive. When this reaches 5%, you should consider backing up some of your older files and freeing up some space.

Using Portable Fixed It! Start Menu Application

Portable Fixed It! Software includes a convenient *Start Menu Application* which makes it easy to launch *Fixed It! ScoreBook*. Simply click the *ScoreBook* menu button to start *ScoreBook* or, drag-and-drop .GAM, .TEM, or two .TEM files onto the *Start Menu Application*.

- When you drag-and-drop a .GAM file, *ScoreBook* starts and automatically loads the Game file.

- When you drag-and-drop a .TEM file, ScoreBook starts and automatically loads the Team file.
- When you drag-and-drop two .TEM files, ScoreBook starts and loads both teams into a new Game file.

As you add Games and Teams -- or, even other files, watch the *Start Menu Application* gauge that indicates the amount of free space on your drive.

We have created a folder on your new drive named '*My Fixed It! Files*' and you can easily access this folder from the *Portable Fixed It! Menu* by clicking the '*Browse My Files*' button. Once this folder is opened, simply drag-and-drop any game or team file onto the *Portable Fixed It! Menu* window that you'd like to edit.

Fixed It! ScoreBook by default will look in the '*My Fixed It! Files*' folder when you open or save new games and teams. This is to help you keep your files on the USB drive and not the host computer's hard drive.

When you are done using your USB drive, select the '*Close*' button to shutdown your USB drive. If you select '*Close : Shutdown My Drive*' the *Start Menu Application* will shutdown any running instances of *Fixed It! Software* so you can safely remove your drive without losing data.
